Reduction of hair loss

MESO HAIR LOSS CONTROL

Reduction of hair loss
MESO HAIR LOSS CONTROL is used on congenital (androgenic) hair loss.
The product contains the exact composition of vitamins, amino acids and minerals that the body needs for an optimum metabolism. The ingredients in MESO HAIR LOSS CONTROL aim to ensure permanent bio-availability and optimise keratin protein production. Amino acids play an important role in protecting healthy hair against hair loss. The product stimulates the circulation of the scalp and can therefore encourage the growth of new hair.

MESO HAIR LOSS CONTROL is suitable for:
• the treatment of congenital (androgenic) hair loss.
• the regeneration and stimulation of hair damaged by environmental influences such as sun and air pollution.
• the treatment of dandruff, excessive sebum production and thin, life-less looking hair.

PANTHENOL
is popular in products for sensitive skin, as it is very skin friendly. It has moisture retaining, skin calming and regenerative properties, strengthens the protective barrier function of the skin and improves its elasticity.

Biotin strengthens the hair
Biotin is a B vitamin that is a component of some metabolic reactions and the regulation of the blood sugar level. Biotin is sometimes also called vitamin H or vitamin B7. Thanks to this vitamin amongst other things, MESO HAIR LOSS CONTROL is an effective remedy against congenital hair loss, and can contribute to hair health.

Areas of application:
• Hair growth regions (scalp, eyebrows, beard)

Advantages of the treatment:
• Can reduce hair loss
• Stimulates the microcirculation
• Can regulate sebum production
• Cares for the roots of the hair
